Kodak
DUAL
INSTAMATIC®
Movie Projectors
show both super 8 and 8mm movies
11-67

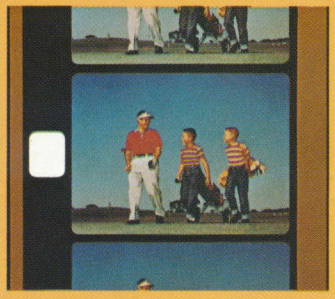
Owning a dual KODAK INSTAMATIC Movie Projector is like having two projectors in one!

With the flick of a switch you're ready to show super 8 or 8mm movies with any of the KODAK INSTAMATIC Movie Projectors shown in this folder.

You can show your 8mm movies or those of visiting friends. Then switch, in a matter of seconds, to a reel of super 8 movies.

Because of the bigger picture size, super 8 movies can only be shown on a super 8 projector such as these KODAK INSTAMATIC Movie Projectors.

New super 8 film format



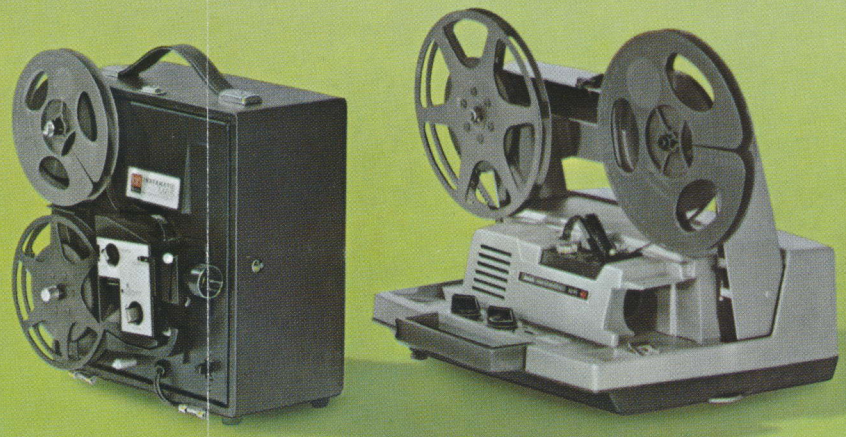
Regular 8mm film format

KODAK INSTAMATIC M65
Movie Projector

Lowest-priced Kodak projector for showing both super 8 and regular 8mm movies. Puts on completely automatic shows from start to finish: threads, projects and rewinds automatically at high speed. It will rewind a 50-foot reel in 15 seconds . . . a 200-foot reel in only 30 seconds. Keeps your show moving fast. Flipping a single lever changes mechanism to accept super 8 or regular 8mm films. 200-foot reel capacity. Built-in case has preview screen in cover. Sharp *f*/1.5 lens.

KODAK INSTAMATIC M85
Movie Projector

Here's the new look in movie projectors. Flip-top cover swings up, positioning spindles for loading 400-foot reels. Fully automatic threading all the way onto the take-up reel. Beautiful, bright screenings, forward and reverse (18 frames per second), plus "still" projection. Converts to show super 8 or regular 8mm movies in seconds. Die-cast construction with convenient storage space for take-up reel and power cord. Available with *f*/1.5 lens or *f*/1.5 zoom lens.



7 projection speeds put more fun and entertainment into home movies than you ever thought possible.

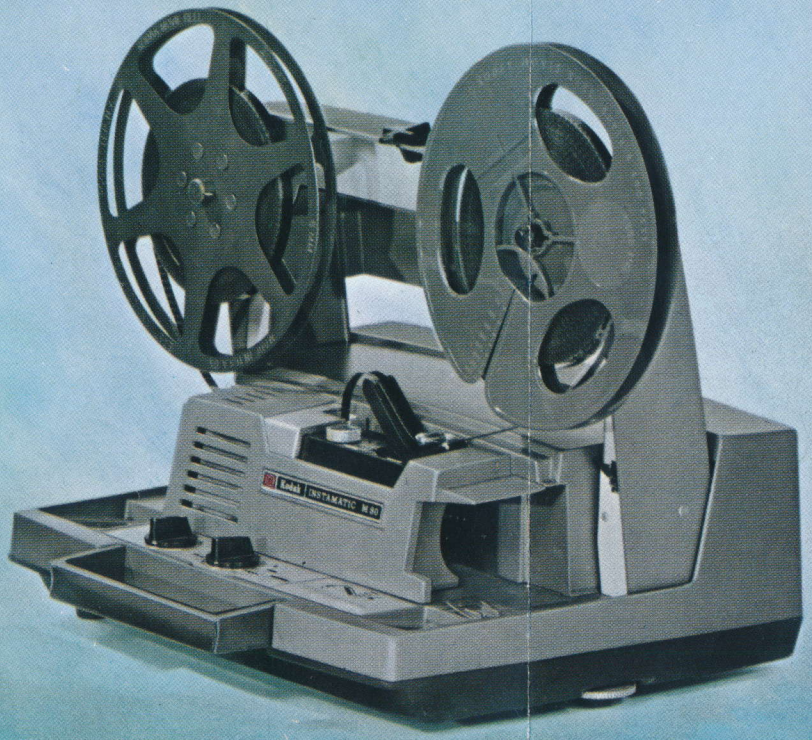
As fast as you can flick the knob, you can switch from forward to reverse . . . from a comic crawl at 6 frames per second, to a normal 18 fps, to a hilariously fast 54 fps. Three speeds forward. Three in reverse. Plus "still". You can dazzle your audience with special effects when and where you like. In effect, you can edit your film while you project it. Try flicker-free slow motion to study a swan dive in detail, or stretch out a brief glimpse of scenery. Switch to superfast and listen to the laughs as pandemonium takes over the screen. Or go superfast to get to a favorite scene in a hurry, or to compress an overly long scene. For sure-fire comedy, switch from forward to reverse at any speed. No danger of damaging your film. All KODAK INSTAMATIC Movie Projectors feature sprocketless projection for gentle film handling.

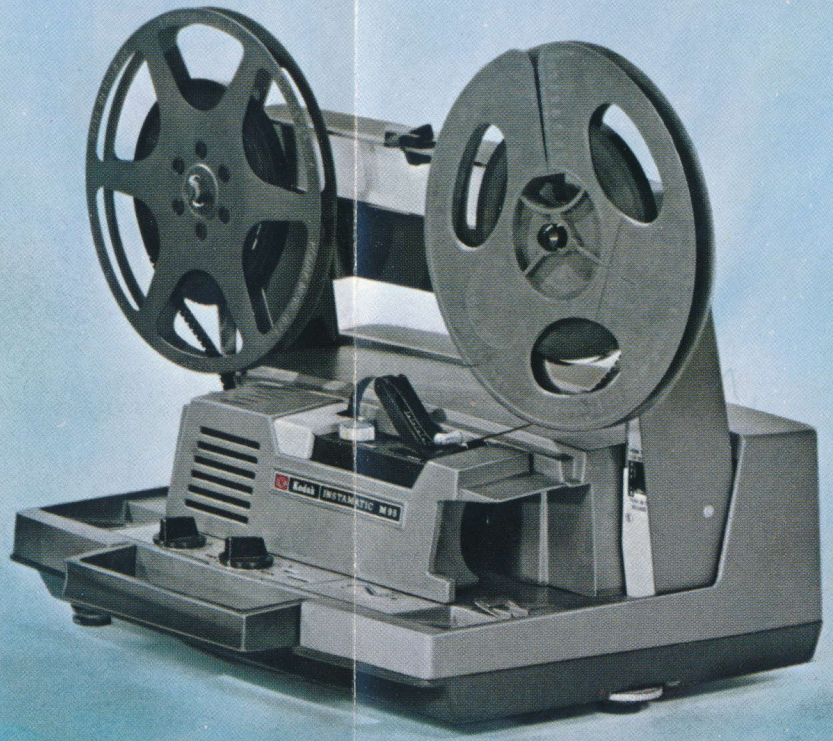
Of course, there's normal projection speed. And you can stop your film for a good, long look at any time. At "still," a heat-absorbing shield protects your film.

With Kodak's exclusive 7-speed projection, you can tailor your show to your audience—and have more movie fun than you've ever had before.

KODAK INSTAMATIC M80
Movie Projector—7-speed projection plus the advantage of showing either super 8 or regular 8mm films. Converts from one to the other in seconds. Flip-top cover swings up, positioning spindles for loading reels. Automatic film threading. Lamp-saver switch. 400-foot reel capacity. Convenient storage space for take-up reel and power cord. Available with *f*/1.5 lens or *f*/1.5 zoom lens.

KODAK INSTAMATIC M95
Movie Projector—All the features of the M80 plus the brightest optical system of any 7-speed projector, and a room-light receptacle. The M95 projector uses the new low-voltage quartz halogen DNF lamp that lasts twice as long as conventional projection lamps. The DNF lamp also maintains full brilliance throughout its life span. Projector is available with the big-screen 22mm *f*/1.5 lens or with the 20-32mm *f*/1.5 zoom lens.

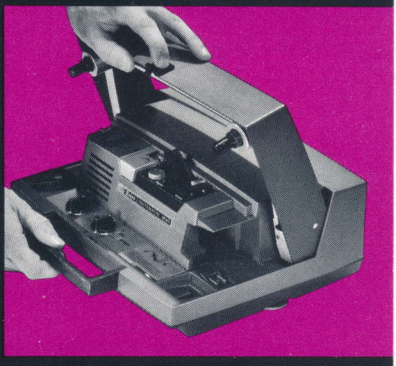




All-new low-silhouette design

Light, compact. Handles as easy as an attaché case.

Easy to set up



Opens at a touch. Flip-top cover swings up, positioning spindles for loading 400-foot reels.
